

Multi-Track Monitor Panel Wiring Guide

By: RPC Electronics, LLC - www.rpc-electronics.com

Thank you for purchasing the RPC Electronics, LLC Multi-Track Monitor Panel. This wiring guide is meant to be a quick-start sheet to get you up and running as fast as possible.

The MTM is simple to wire up! There are four “channels” each indicated on the front panel, as well as the rear wiring terminal blocks by TRACK 1 - TRACK 4. The connections can be made from the track to the panel or from the bus feeding the track.

When using DCC, the LEDs will light orange. When using DC, the LEDs will light either red or green, depending on the voltage polarity on the track at the time of operation.

The diagram below shows the most simple wiring scheme used to connect the panel to your tracks. In this example, four individual mainlines are connected to the panel.
